THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN **THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE** OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. **THIS STATUTORY PERIOD CANNOT BE EXTENDED.** SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Thomas Lundin on 20 July 2009.

The application has been amended as follows:

At Claim 1, line 12, change "on application of an iteration operator" to --on application of the iteration operator--.

At Claim 9, line 1, change "A computer program" to --A computer readable medium encoded with a computer program--.

Allowable Subject Matter

2. Claims 1-9 are allowed.
3. The following is an examiner's statement of reasons for allowance.

With respect to claim 1, the prior art does not teach or fairly suggest a method including the steps of providing an iteration operator, on application of an iteration operator to a projection the following operations are carried out:

back projection of the projection in a projection geometry, which is allocated to a first projection direction,

forward projection of the back-projected values in a projection geometry, which is allocated to a second projection direction,

filtering the forward-projected values with a filter operator of the second projection direction, when taken in combination with all the other elements of the claim. Claims 2-9 are allowed by virtue of their dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Claus (US 2005/0058240 A1) discloses an imaging method comprising the steps:

a) generating a projection data record (via 10) of an examination area (14) to be reconstructed by acquiring projections from different projection directions (Paragraph 17), a projection direction is necessarily allocated to each projection and a projection geometry is necessarily allocated to each projection direction (projection imaging positions necessarily store in order to perform subsequent reconstruction),

b) providing an iteration operator that is dependent on a first projection direction, a second projection direction and a filter operator allocated to the second projection direction, and determining, in each case, a filter operator for each projection direction, the filter operators being adapted such that necessarily an averaging over all iteration operators, that have the same first projection direction but different second projection directions, substantially produces an identity operator and in which, on application of an iteration operator to a projection the following operations are carried out:

- filtering the forward-projected values with a filter operator of the second projection direction,

- back projection of the filtered values in a projection geometry, which is allocated to the second projection direction,

- forward projection of the filtered, back-projected values in a projection geometry which is allocated to the first projection direction (Paragraphs 20 and 41-59),

c) reconstruction of an image of the examination area from the projections with the aid of a filtered back projection, in which the filter operator of the corresponding projection direction is applied to each projection (Abstract and Paragraphs 5-9 and 17-20).

Hoheisel et al. (US 7,447,295 B2) discloses iteratively determining optimal filters for a system of given geometry. The optimal filters obtained are utilized to perform optimal backprojecting on projections obtained on any object subsequently imaged on the system (Abstract and claim 1).
